

Claims

1. An information recording device for recording three-dimensional information measured with a measuring device which measures the three-dimensional information on a body, comprising:

storage means for storing measured data based on the three-dimensional information measured by said measuring device and protection information for protecting said measured data from being read out; and

interface means for performing interface processing of storing the measured data based on the three-dimensional information output from said measuring device in said storage means and of reading out the measured data stored in said storage means to provide an external device.

2. The information recording device according to Claim 1, wherein

said protection information is enciphered.

3. The information recording device according to Claim 1, wherein

said protection information is information for specifying a person having a body of the three-dimensional information.

4. The information recording device according to Claim 3, wherein

said protection information is information showing the body characteristics of the person having the body of the three-dimensional information.

5. The information recording device according to Claim 4, wherein

said protection information is used as texture data of the three-dimensional information.

6. The information recording device according to Claim 4, wherein

said protection information is finger print information on the person having the body of the three-dimensional information.

7. The information recording device according to Claim 4, wherein

said protection information is voice information on the person having the body of the three-dimensional information.

8. The information recording device according to Claim 3, wherein

said protection information is a password set by the person having the body of three-dimensional information.

002707255560

9. The information recording device according to Claim 1,
wherein

said information recording device is a portable device.

10. The information recording device according to Claim 1,
wherein

said storage means is a semiconductor memory.

11. The information recording device according to Claim 1,
wherein

the three-dimensional information includes three-dimensional
shape information and texture information on the body.

12. The information recording device according to Claim 1,
wherein

said measured data includes parameters produced by comparing
a standard three-dimensional model with the three-dimensional
information.

13. The information recording device according to Claim 1,
wherein

said measured data is hierarchically stored every part of the
body.

14. The information recording device according to Claim 13,
wherein

said measured data is hierarchically stored in accordance
with the details of the parts of the body.

15. The information recording device according to Claim 1,
wherein

said interface means receives the measured data from said
measuring device through a communication circuit and provides the
measured data for an external device through the communication
circuit.

16. A measuring device for measuring three-dimensional
information on a body and for outputting measured data based on
the three-dimensional information to an information recording
device, comprising:

measuring means for measuring the three-dimensional
information on the body;

input means for inputting protection information for
protecting the measured data based on the three-dimensional
information on the body from being read out from said information
recording device; and

interface means for outputting the measured data based on the
three-dimensional information measured by said measuring means and

the protection information input with said input means to said information recording device.

17. The measuring device according to Claim 16, further comprising:

storage means for storing data of standard three-dimensional models; and

producing means for producing feature parameters by comparing the three-dimensional information measured by said measuring means with data of the standard three-dimensional model, wherein

said interface means outputs the feature parameters and the protection information to said information recording device.

18. The measuring device according to Claim 16, wherein

said input means inputs information for specifying a person having a body of the three-dimensional information as protection information.

19. The measuring device according to Claim 18, wherein

said input means inputs information showing body characteristics of the person having the body of the three-dimensional information as the protection information.

20. The measuring device according to Claim 19, wherein

said input means inputs said protection information as texture data of the three-dimensional information.

21. The measuring device according to Claim 19, wherein
said input means inputs finger print information on the person having the body of the three-dimensional information as the protection information.

22. The measuring device according to Claim 19, wherein
said input means inputs voice information on the person of the body of the three-dimensional information as the protection information.

23. The measuring device according to Claim 18, wherein
said input means inputs a password set by the person having the body of the three-dimensional information as the protection information.

24. The measuring device according to Claim 16, wherein
said interface means is so constituted that said information recording device can be attached/detached.

25. The measuring device according to Claim 16, wherein

said measuring means measures the three-dimensional information and texture data about the body as the three-dimensional information.

26. The measuring device according to Claim 16, wherein said interface means provides said information recording device with the measured data and the protection information through a communication circuit.

27. A measuring method of measuring three-dimensional information on a body and of outputting measured data based on the three-dimensional information to an information recording device, comprising:

a measuring step of measuring three-dimensional information on the body;

an input step of inputting protection information for protecting the measured data based on the three-dimensional information on the body from being read out from said information recording device; and

an output step of outputting the measured data based on the three-dimensional information measured by said measuring step and the protection information input at said input step to said information recording device.

28. The measuring method according to Claim 27, further comprising

a producing step of producing feature parameters by comparing the three-dimensional information measured by said measuring step with standard three-dimensional model data stored in a storage unit, wherein

said output step outputs the feature parameters and the protection information to said information recording device.

29. The measuring method according to Claim 27, wherein

said input step inputs information for specifying a person having the body of the three-dimensional information as the protection information.

30. The measuring method according to Claim 29, wherein

said input step inputs information showing the body characteristics of the person having the body of the three-dimensional information as the protection information.

31. The measuring method according to Claim 30, wherein

said input step inputs the protection information as texture data of the three-dimensional information.

32. The measuring method according to Claim 30, wherein

said input step inputs finger print information on the person having the body of the three-dimensional information as the protection information.

33. The measuring method according to Claim 30, wherein
said input step inputs voice information on the person having the body of the three-dimensional information as the protection information.

34. The measuring method according to Claim 29, wherein
said input step inputs a password set by the person having the body of the three-dimensional information as the protection information.

35. The measuring method according to Claim 27, wherein
said output step outputs the measured data and the protection information to said information recording device which is so constructed as to be attached/detached to/from an information processing device which executes said measuring method.

36. The measuring method according to Claim 27, wherein
said measuring step measures the three-dimensional information and texture data about the body as the three-dimensional information.

37. The measuring method according to Claim 27, wherein
said output step provides the measured data and the
protection information for said information recording device
through a communication circuit connected to an information
processing device which executes said measuring method.

38. An information providing medium for measuring three-
dimensional information on a body and for providing an information
processing device with control information for outputting measured
data based on the three-dimensional information to an information
recording device, wherein:

said control information includes:

a measuring command to measure the three-dimensional
information on the body;

an input command to input protection information for
protecting the measured data based on the three-dimensional
information on the body from being read out from said
information recording device; and

an output command to output the measured data based on
the three-dimensional information measured based on said
measuring command and the protection information input based
on said input command.

39. The information providing medium according to Claim 38,
wherein:

the control information further includes a producing command to produce feature parameters by comparing the three-dimensional information measured based on said measuring command with the standard three-dimensional model data stored in a storage unit; and

said output command is a command to output the feature parameters and the protection information to said information recording device.

40. The information providing medium according to Claim 38, wherein

said input command is a command to input information for specifying the person having the body of the three-dimensional information as the protection information.

41. The information providing medium according to Claim 40, wherein

said input command is a command to input information showing the body characteristics of the person having the body of the three-dimensional information as the protection information.

42. The information providing medium according to Claim 41, wherein

said input command is a command to input the protection information as texture data of the three-dimensional information.

43 The information providing medium according to Claim 41,
wherein

said input command is a command to input finger print
information of the person having the body of the three-dimensional
information as the protection information.

44. The information providing medium according to Claim 41,
wherein

said input command is a command to input voice information of
the person having the body of the three-dimensional information as
the protection information.

45. The information providing medium according to Claim 40,
wherein

said input command is a command to input a password set by
the person having the body of the three-dimensional information as
the protection information.

46. The information providing medium according to Claim 38,
wherein

said output command is a command to output the measured data
and the protection information to said information recording
device which is so constructed as to be attached/detached to/from

an information processing device which executes the control information.

47. The information providing medium according to Claim 38, wherein

said measuring command is a command to measure three-dimensional shape information and texture information on the body as the three-dimensional information.

48. The information providing medium according to Claim 38, wherein

said output command is a command to provide the measured data and the protection information for said information recording device through a communication circuit connected to an information processing device which executes said control information.

49. An information processing device for reading out measured data from an information recording device which records the measured data based on three-dimensional information on a body and protection information for protecting the measured data from being read out, and for performing prescribed processing, said information processing device comprising:

interface means for performing interface processing to read out the measured data and the protection information from said information recording device;

input means for inputting authentication information for authenticating the reading-out of the measured data from said information recording device;

authenticating means for reading out the protection information from said information recording device through said interface means and for performing authentication processing using the authentication information input by said input means;

control means for controlling the reading-out of the measured data from said information recording device in accordance with the authentication result by said authenticating means; and

processing means for performing prescribed processing utilizing the measured data which is read out from said information recording device through said interface means under the control of said control means.

50. The information processing device according to Claim 49, further comprising

storage means for recording standard three-dimensional model data, wherein:

the measured data includes feature parameters produced by being compared with a standard three-dimensional model; and

said processing means performs prescribed processing based on data produced by applying the feature parameters read out from said information recording device to the standard three-dimensional model data.

51. The information processing device according to Claim 50,
wherein

said storage means stores model data different from the
standard three-dimensional model which is used to produce the
feature parameters recorded with said information recording device,
as the standard three-dimensional model data.

52. The information processing device according to Claim 49,
wherein

said input means inputs information for specifying a person
having the body of the three-dimensional information as
authentication information.

53. The information processing device according to Claim 52,
wherein

said input means inputs information showing the body
characteristics of the person having the body of the three-
dimensional information as the authentication information.

54. The information processing device according to Claim 53,
wherein

said input means inputs the authentication information as
texture data of the three-dimensional information.

55. The information processing device according to Claim 53,
wherein

said input means inputs finger print information of the
person having the body of the three-dimensional information as the
authentication information.

56. The information processing device according to Claim 53,
wherein

said input means inputs voice information of the person
having the body of the three-dimensional information as the
authentication information.

57. The information processing device according to Claim 52,
wherein

said input means inputs a password set by the person having
the body of the three-dimensional information as the
authentication information.

58. The information processing device according to Claim 49,
wherein

said interface means is so constructed that said information
recording device can be attached/detached.

59. The information processing device according to Claim 49,
wherein

said measured data includes three-dimensional shape information and texture information on the body.

60. The information processing device according to Claim 49, wherein

said interface means receives the measured data and the protection information from said information recording device through an communication circuit.

61. The information processing device according to Claim 49, wherein:

said information recording device hierarchically stores the measured data every part of the body; and

said processing means selects and utilizes any hierarchy of measured data out of the measured data.

62. The information processing device according to Claim 49, wherein:

said information recording device hierarchically stores the measured data in accordance with the details of the parts of the body; and

said processing means selects and utilizes any hierarchy of measured data out of the measured data.

63 The information processing device according to Claim 49,
wherein

said control means performs control to delete the measured data recorded with said information recording device, when said authenticating means detects the dishonest authentication result a predetermined number of times.

64. An information processing method of reading out measured data from an information recording device which records the measured data based on three-dimensional information on a body and protection information for protecting the measured data from being read out, to perform prescribed processing, said information processing method comprising:

an input step of inputting authentication information for authenticating the reading-out of the measured data from said information recording device;

an authenticating step of reading out the protection information from said information recording device and of performing authentication processing using the authentication information input at said input step;

a control step of controlling the reading-out of the measured data from said information recording device in accordance with the authentication result of said authenticating step; and

a processing step of performing prescribed processing using the measured data read out from said information recording device under the control of said control step.

65. The information processing method according to Claim 64, wherein:

said measured data includes feature parameters produced by being compared with a standard three-dimensional model; and

said processing step performs prescribed processing based on data produced by applying the feature parameters read out from said information recording device to the standard three-dimensional model data stored in a storage unit.

66. The information processing method according to Claim 65, wherein

the standard three-dimensional model data is model data different from the standard three-dimensional model used to produce the feature parameters recorded with said information recording device.

67. The information processing method according to Claim 64, wherein

said input step inputs information for specifying a person having the body of the three-dimensional information as the authentication information.

68. The information processing method according to Claim 67,
wherein

said input step inputs information showing the body characteristics of the person having the body of the three-dimensional information as the authentication information.

69. The information processing method according to Claim 68,
wherein

said input step inputs the authentication information as texture data of the three-dimensional information.

70. The information processing method according to Claim 68,
wherein

said input step inputs finger print information on the person having the body of the three-dimensional information as the authentication information.

71. The information processing method according to Claim 68,
wherein

said input step inputs voice information on the person having the body of the three-dimensional information as the authentication information.

72. The information processing method according to Claim 67,
wherein

said input step inputs a password set by the person having
the body of the three-dimensional information as the
authentication information.

73. The information processing method according to Claim 64,
wherein

said control step controls the reading-out of the measured
data from said information recording device which is so
constructed as to be attached/detached to/from an information
processing device which executes said information processing
method.

74. The information processing method according to Claim 64,
wherein

said measured data includes three-dimensional shape
information and texture information on the body.

75. The information processing method according to Claim 64,
wherein

said control step receives the measured data from said
information recording device through a communication circuit
connected to an information processing device which executes said
information processing method.

09555137 071200

76. The information processing method according to Claim 64,
wherein

said processing step selects and utilizes any hierarchy of
measured data out of the measured data hierarchically stored every
part of the body in said information recording device.

77. The information processing method according to Claim 64,
wherein

said processing step selects and utilizes any hierarchy of
measured data out of the measured data hierarchically stored in
accordance with the details of the parts of the body in said
information recording device.

78. The information processing method according to Claim 64,
wherein

said control step performs control to delete the measured
data recorded with said information recording device, when said
authenticating step detects the dishonest authentication result a
predetermined number of times.

79. An information providing medium for reading out measured data
from an information recording device which records the measured
data based on three-dimensional information on a body and
protection information for protecting the measured data from being

0955137.071200

read out, and for providing an information processing device with control information for performing prescribed processing, wherein:

said control information includes:

an input command to input authentication information for authenticating the reading-out of the measured data from said information recording device;

an authenticating command to read out the protection information from said information recording device and to perform authentication processing utilizing the authentication information input based on said input command;

a control command to control the reading-out of the measured data from said information recording device in accordance with the authentication result based on the authenticating command; and

a processing command to perform prescribed processing utilizing the measured data read out from said information recording device under the control of said control command.

80. The information providing medium according to Claim 79, wherein:

the measured data includes feature parameters produced by being compared with a standard three-dimensional model; and

said processing command is a command to perform prescribed processing based on data produced by applying the feature

parameters read out from said information recording device to the standard three-dimensional model data stored in a storage unit.

81. The information providing medium according to Claim 80, wherein

the standard three-dimensional model data is model data different from the standard three-dimensional model used to produce the feature parameters stored in said information recording device.

82. The information providing medium according to Claim 79, wherein

said input command is a command to input information for specifying the person having the body of the three-dimensional information as the authentication information.

83. The information providing medium according to Claim 82, wherein

said input command is a command to input information showing the body characteristics of the person having the body of the three-dimensional information as the authentication information.

84. The information providing medium according to Claim 83, wherein

said input command is a command to input the authentication information as texture data of the three-dimensional information.

85. The information providing medium according to Claim 83, wherein

said input command is a command to input finger print information on the person having the body of the three-dimensional information as the authentication information.

86. The information providing medium according to Claim 83, wherein

said input command is a command to input voice information on the person having the body of the three-dimensional information as the authentication information.

87. The information providing medium according to Claim 82, wherein

said input command is a command to input a password set by the person having the body of the three-dimensional information as the authentication information.

88. The information providing medium according to Claim 79, wherein

said control command is a command to control the reading-out of the measured data from said information recording device which

is so constructed as to be attached/detached to/from an information processing device which executes the control information.

89. The information providing medium according to Claim 79, wherein

said measured data includes three-dimensional shape information and texture information on the body.

90. The information providing medium according to Claim 79, wherein

said control command is a command to receive the measured data from said information recording device through a communication circuit connected to an information processing device which executes the control information.

91. The information providing medium according to Claim 79, wherein

said processing command is a command to select and utilize any hierarchy of measured data out of the measured data hierarchically stored in said information recording device every part of the body.

92. The information providing medium according to Claim 79, wherein

said processing command is a command to select and utilize any hierarchy of measured data out of the measured data hierarchically stored in said information recording device in accordance with the details of the parts of the body.

93. The information providing medium according to Claim 79, wherein

said control command includes a command to control to delete the measured data recorded with said information device when the authentication result based on said authentication command is dishonest a predetermined number of times.

94. An information processing system composed of a measuring device for measuring three-dimensional information on a body, an information recording device for recording measured data based on the three-dimensional information measured by said measuring device, and an information processing device for reading out the measured data from said information recording device and performing prescribed processing, wherein:

said information recording device comprises:

first storage means for storing measured data based on the three-dimensional information measured by said measuring device and protection information for protecting the measured data from being read out; and

09555137.071200

first interface means for performing interface processing of storing measured data based on the three-dimensional information output from said measuring device in said storage means and of reading out the measured data stored in said storage means to provide an external device; said measuring device comprises:

measuring means for measuring three-dimensional information on the body;

first input means for inputting protection information for protecting the measured data based on the three-dimensional information of the body from being read out from said information recording device; and

second interface means for outputting the measured data based on the three-dimensional information measured by said measuring means and protection information input by said input means, to said information recording device; and said information processing device comprises:

third interface means for performing interface processing of reading out the measured data and the protection information from said information recording device;

second input means for inputting authentication information for authenticating the reading-out of the measured data from said information recording device;

authenticating means for reading out the protection information from said information recording device through

said interface means and for performing authentication processing utilizing the authentication information input by said input means;

control means for controlling the reading-out of the measured data from the information recording device in accordance with the authentication result of said authenticating means; and

processing means for performing prescribed processing utilizing the measured data read out from said information recording device through said interface means under the control of said control means.

95. An information processing method in an information processing system composed of a measuring device for measuring three-dimensional information on a body, an information recording device for recording measured data based on the three-dimensional information measured by said measuring device, and an information processing device for reading out the measured data from said information recording device and performing prescribed processing, wherein:

an information processing method of said measuring device comprises:

a measuring step of measuring three-dimensional information on the body;

a first input step of inputting protection information for protecting the measured data based on the three-dimensional information on the body from being read out from said information recording device; and

an output step of outputting the measured data based on the three-dimensional information measured by said measuring step and the protection information input at said input step, to said information recording device; and

an information processing method of said information processing device comprises:

a second input step of inputting authentication information for authenticating the reading-out of the measured data from said information recording device;

an authenticating step of reading out the protection information from said information recording device and of performing authentication processing utilizing the authentication information input at said input step;

a control step of controlling the reading-out of the measured data from said information recording device in accordance with the authentication result of said authenticating step; and

a processing step of performing prescribed processing utilizing the measured data read out from said information recording device under the control of said control step.

09555137 071200

96. An information providing medium for providing control information for executing processing for an information processing system composed of a measuring device for measuring three-dimensional information on a body, an information recording device for recording measured data based on the three-dimensional information measured by said measuring device, and an information processing device for reading out the measured data from said information recording device and performing prescribed processing, wherein:

control information which is provided said measured device includes:

a measuring command to measuring three-dimensional information on the body;

a first input command to input protection information for protecting the measured data based on the three-dimensional information on the body from being read out from said information recording device; and

an output command to output the measured data based on the three-dimensional information measured by said measuring step and the protection information input at said input step, to said information recording device; and

control information which is provided said information processing device comprises:

002720 255560

a second input command to input authentication information for authenticating the reading-out of the measured data from said information recording device;

an authenticating command to read out the protection information from said information recording device and to perform authentication processing utilizing the authentication information input at said input step;

a control command to control the reading-out of the measure data from said information recording device in accordance with the authentication result of said authenticating step; and

a processing command to perform prescribed processing utilizing the measured data read out from said information recording device under the control of said control step.
